

Fustiplast was established in 1947 and since then specializing in industrial packaging. The company has been operating in the world of plastic-materials for more than 35 years. The strategy was based on a solid platform; innovations and quality leadership that have resulted in long-term relationships with major companies in the chemical, food and pharmaceutical industries.

Fustiplast has acquired a solid know-how thanks to a continuous development coming along with high level investments in technologies and training, with a strong commitment to research and development. During the last years, under the management of Mr. Virginio Cassina and his sister Mrs. Anna Cassina, the company has distinguished itself through process-driven product development in partnership with customers and Fustiplast achieved operational excellence based on decentralised decision-making processes and cost consciousness.

Fustiplast mission is to be an outstanding supplier of industrial plastic packaging, recognised for entrepreneurial and innovative spirit with excellent customer relations and committed employees.

Fustiplast is considered the No. 1 in industrial plastic packaging in Italy, and has strengthened its Leadership developing an international vocation opening in January 2006 a new production plant in Germany and a second one in Brazil.

Fustiplast produces containers from 5lt up to 1.000lt in high density-high molecular weight polyethylene (HDPE), using the blowmoulding-technology. According to the market requirements, these containers can be standard, UN homologated for transportation of dangerous goods and suitable for food and cosmetic products. Some items, produced with the co-extrusion-technology, are suitable in the field of high purity products.

Fustiplast has several patents and trademarks such as Flubox[®], the new generation of Intermediate Bulk Containers, which has been rewarded by market with remarkable technical consent. A great commercial development has been achieved since its first introduction.

Fustiplast is pleased to announce an important step towards a strong commitment to the German market. We will open very soon a new production site at Hückelhoven in the region of Heinsberg where we will install a production line for the production of our Flubox[®] IBC. The first Flubox will be born at Hückelhoven latest in August 2008.

Fustiplast thanks its People, its suppliers and its customers for their faith and who have believed in Fustiplast over the past years. Without a strong relationship with all of them, the company could never achieve this development.
